FOREWORD

The 18th All India Livestock Census covering poultry as well as agriculture implements, machinery and fishery statistics conducted in the state of West Bengal was completed in scheduled time by the Directorate of Animal Resources and Animal Health, Government of West Bengal, with 15th October 2007 as reference date.

This report has been prepared to be very effective with rural/urban as well as mouza/parawise elaborate breakups for each district. Moreover the introduction of a Geographical Information System (GIS) since last census year with digital mapping of livestock data at mouza, G.P., Block, Sub-Division (Rural) and District (Rural) level for rural areas and ward, Municipal area, Sub-Division (Urban) and District (Urban) level for urban area has added new dimension to the livestock census of our state.

In this connection I greatly appreciate the well coordinated team work of Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) as well as Additional State Livestock Census Officer, Shri T. R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, along with other Officers and Staff of the Animal Resources Development Department in making the 18th Livestock Census a successful one.

Like previous years this census report will be most utilized in formulating different welfare plans and schemes for the state as well as in various relevant research projects.

PREFACE

The final report of the 18th All India Livestock Census for the state of West Bengal with reference date 15th October 2007, has been successfully prepared within due time. This vast well compiled report with district-wise mouza/para level data consists of updated basic data on livestock and poultry population, agriculture implements and machinery, fisheries and livestock and fishery infrastructure.

The team of officers whose hard work and co-operation has been indispensable for the timely completion of census work and publication of the report are Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) and Shri T. R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, along with innumerable district and state-level Livestock Census Officers and Staff.

The information provided in the report will prove very useful to all those who use animal husbandry related data in their respective work areas.

INTRODUCTION

The Directorate of Animal Resources and Animal Health, Government of West Bengal in co-ordination with Government of India, Department of Animal Husbandry, Dairying and Fisheries, has completed the 18th All India Livestock Census in the state of West Bengal in due time. Apart from enumeration, supervision, compilation and tabulation, this huge census work also involves publication of both hard and soft copies of the report.

Dr. P. K. Bhattacharjee, Joint Director of Animal Husbandry (Statistics) and Additional State Livestock Census Officer, 18th Livestock Census, West Bengal, Shri T.R. Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, West Bengal and many other Officers and Staff of this directorate have efficiently shouldered the responsibility of completing the census work with perfection.

Planners as well as all people working in animal resources and associated sectors will be amply benefitted from the useful findings of this elaborate census work.

TECHNICAL ASPECTS OF THE 18TH LIVESTOCK CENSUS

The total count of livestock population and its composition is available from the livestock census, which is the most important single source of data. The Department of Animal Husbandry, Dairying and Fisheries, Ministry of Agriculture, Government of India, conducted the 18th Livestock Census with reference date 15th October 2007. The census operations are carried out in different States and Union Territories by the respective State Governments. Undoubtedly an expensive statistical exercise this census it is indispensable for understanding the demographic structure of our livestock so as to be properly equipped to carry out livestock improvement programmes in the country. The livestock census covers not only livestock but includes information on fisheries and agricultural implements and machinery.

In 1919-20, the first livestock census of cattle was conducted. The subsequent censuses were conducted at intervals of five years. 18 such livestock censuses have been completed till now.

In the 18th Livestock Census, breed-wise data of indigenous cattle, buffalo, sheep, goat, pig and fowl was collected for the first time in the State of West Bengal. In the present report the cross-bred and indigenous cattle have been clubbed together as in the earlier reports for comparability with the past.

Canvassed schedule of enquiry in each household obtains information on 512 items for each household. In addition, information on another 127 items on livestock and fishery infrastructure and commercial poultry birds stock is collected for each mouza, ward and each commercial poultry farm. Field workers undertake house-to-house enumeration to ascertain stock of livestock, agricultural implements and machinery, fishing craft and tackle (as well as number of persons engaged in fishing and ancillary activities), etc., possessed by households and institutions. The field work is mainly conducted by primary workers, consisting of staff drawn from the Animal Resources Development Department and Prani-bandhu personnel¹.

State-level training of trainers was arranged at Barasat, in the district of North 24 Parganas. A manual of instructions was circulated to all districts. State-level Livestock Census Officers and Headquarters Officers of the Statistical Cell also trained the block/municipality/sub division Livestock Census Officers. The trained officers in turn trained the enumerators in the field work. A tabulation manual was prepared and sent to all districts to obtain the data in tabulated form.

Livestock, Poultry, Agricultural Implements and Machinery, and Fisheries are the four main parts of the Livestock Census. As these four parts involve a huge amount of data compilation, appropriate software called LCMS (Livestock Census Management System) has been developed. In West Bengal, Geographical Information System (GIS) has been developed for digital mapping of livestock data at all levels for each district. The systematic data base prepared in the 18th Livestock Census goes down to the level of mouza/para. The district profile includes pictorial graphs and the write-up gives a comprehensive account of the State's livestock position.

¹ Educated unemployed youths trained in livestock care by Paschim Banga Gô-sampad Bikash Sanstha, a Govt. of West Bengal organisation

I would like to place on record my deep appreciation for Sri Ansur Rahaman, Hon'ble Minister-in-Charge, Animal Resources Development Department, Sri D.K. Chakraborty, IAS, Principal Secretary to the Government of West Bengal, Animal Resources Development Department and Dr. K. Saha, Director of Animal Husbandry and Veterinary Services, Directorate of Animal Resources and Animal Health for their constant encouragement in compilation of the Report on the 18th Livestock Census. Their valuable suggestions have greatly contributed to the successful completion of the Livestock Census.

We are thankful to Dr D.K. Das, Chief Executive Officer, Paschim Banga Go-sampad Bikash Sanstha, for his encouragement in the engagement of PraniBandhus in the enumeration work.

This report has received immense help and cooperation from all officers and staff of the Animal Resources Development Department. I wish to express my sincere appreciation to all of them for their whole-hearted support.

The preparation of the report has been made possible primarily due to the keen interest of Sri Tushar Ranjan Nath, Statistical Officer and Deputy State Livestock Census Officer, 18th Livestock Census, West Bengal who worked very sincerely and with great zeal in achieving the target of releasing the results in the shortest possible time. Sri Nath developed the aspects of computerization, digital mapping and analytical work, and prepared the district profiles with the Assistance of Dr. Arindam Kundu, Statistical Officer and Assistant State Livestock Census Officer, Smt. Supriya Roy, Bengali Translator and Assistant Livestock Census Officer (Publicity) of this Directorate has also worked hard to make possible the elaborate and informative introductory write up on each of the nineteen districts and for the state of West Bengal as a whole. I also acknowledge the contribution made by other officers and staff of the Statistical Cell in bringing out the results in a very short time.

The statistical help received from the Bureau of Applied Economics and Statistics, Government of West Bengal, Department of Animal Husbandry, Dairying and Fisheries, Ministry of Agriculture, Government of India and other different organisations/institutions for various analytical parts of the Report is thankfully acknowledged.

The management of Silpabarta Printing Press Ltd. (a Government of West Bengal Undertaking) and workers deserve appreciation for their untiring cooperation in printing of books and computerized tabulation.

I am sure that scientists, researchers, policy planners and livestock data experts will benefit immensely from the information contained in this publication. We look forward to suggestions and comments on the information contained in this publication, which will be valuable for our future publications.

Government of West Bengal
Office of the Deputy Director of A.R.D. & Parishad Officer, Purulia

Acknowledgement

The 18th All India Livestock Census, Agriculture Implements and Machinery, Fishery Statistics, West Bengal has been conducted in Purulia district and completed successfully in due time. Purulia district is located in the western most part of West Bengal and girdled by the 'Tropic of Cancer'. So the climatic condition of this district is always extreme in nature and dominate the livelihood of it's inhabitants. Moreover maximum area of this district is covered by hills and plateaus, so scope of agriculture is threatened due to scarcity of water. In addition to this, lack of proper communication also hampered the census work. But, our enthusiastic and energetic census workers, enumerators and tabulators made it possible to achieve this mission.

So, I am thankful to those persons mainly Assit. District Livestock Census Officers, Sub-divisional Livestock Census Officers, Block Livestock Census Officers, Municipality Livestock Census Officers, Tabulators and Enumerators of this district who were engaged in this census work and completed it successfully in due time.

I am sincerely grateful to the Block Development Officers, Savapatis, Chairman, Councilors and Pradhans of different blocks and municipalities of Purulia District, who have co-operated in conducting this mammoth work. I am also grateful to the District Magistrate, Savadhipati and other line department officials for their guidance in performing this work.

I am grateful to State Livestock Census Officer, West Bengal and Dr. P.K. Bhattacharya, Addl. State Livestock Census Officer and Sri T.R. Nath, Dy. State Livestock Census Officer and other officials at headquarter for their co-operation in our census work time to time.

At last, I am grateful to those households who had co-operated with our census workers by providing household data, otherwise this massive work would have remained incomplete.

PURULIA DISTRICT PROFILE

INTRODUCTION :

Purulia is a district brought to the state of West Bengal from Bihar. Backward both economically and socially, large part of the soil at the district is yet to be reclaimed due to their rocky nature. The geographical area of the district is 6259 sq. k m. out of which urban and rural areas are 79.37 sq k.m. and 6179.63 sq k m. respectively. The district has an average literacy rate of 68%, higher than the national average of 59.5%.

LOCATION :

Purulia is the westernmost district of West Bengal. It is girdled by the Tropic of Cancer. Its latitudinal and longitudinal extents are from 22°42'35" to 23°42'0" North and from 85°49'25" to 86°54'37" East respectively. The Bay of Bengal and the Hooghly estuary are within 220 kilometres from the centre of the district. Its physiographic location is also distinguished as a zone of transition between the young alluvial plains of West Bengal and the ancient plateau of south-east Bihar.

The district has an all-India significance because of its tropical location, its shape as well as its function like a funnel. It funnels not only the tropical monsoon current from the Bay to the subtropical parts of north-west India, but also acts as a gateway between West Bengal and Orissa, Bihar, Madhya Pradesh and Uttar Pradesh.

ORIGIN :

Purulia District owes its name to an ordinary village, which had gradually grown in importance and became the headquarters of the erstwhile Manbhum district in 1838. The name was retained when Purulia was separated from Bihar and joined to West Bengal in 1956. Since 1838, by virtue of its accessibility, strategic importance, administrative convenience and increasing commercial activity, Purulia became a conspicuous town-name on Survey of India's maps.

HISTORY :

Very little is known of Purulia before the East India Company obtained the Diwani of Bengal, Bihar and Orissa in 1765. Purulia formed the eastern fringe of the inaccessible country known as Vajra-bhumi in old times. It was one of the 16 Mahajanapadas of eastern India mentioned in the Jaina Bhagavati-sutra of circa 5th century A.D.

Our earliest glimpse into this buffer zone between the Damodar plains and the Chhotanagpur plateau catches two struggling races. One was a fair-skinned people, who entered the forested margins of the plateau by the river valleys of the Rarh from the east and south-east, called themselves Rajputs, occupied the fertile lowlands and consolidated their position with socio-economic progress. The other had long dwelt in the peneplains of Vajra-bhumi in different groups, each group under a village head called Munda. The newcomers drove back the original inhabitants of Vajra-bhumi into the forests and hills. The ethnic names of these aborigines are Kurmi, Santal, Bhumij, Bauri, Kora, Mahli and Munda, etc. The pure as well as mixed descendants from these people make up the greater portion of the district's population. It is difficult to state precisely when the Brahmanical settlements made inroads into the district, but they had secured a firm footing by late mediaeval times.

Most probably, Purulia formed, since the 7th century A.D., a part of the mighty kingdoms of Sasanka, the Palas, the Senas and the Mughals. Little wonder, that the main currents of history had been forced by geography to by-pass this inaccessible district. Purulia played the role of a marchland for the first time in

1590s when Man Singh's army moved through Jharkhand to Medinipur. Panchet fort was probably built at that time. In the 17th century, Panchet, for the first time, figured as a revenue-earning estate under the control of Murshidabad.

With the advent of the British, there emerged a new unit of administration, which became distinct by the Regulation of 1793. The primary object of the new administration was to collect as much revenue as possible. To achieve this goal, they had to set up well-knit administrative units and subjugate the independent or semi-independent chieftains under a strong central administration. The enforcement of this policy was all the more important in Purulia and its neighbourhood (at that time known as the Jungle Mahals of Medinipur) where the physical milieu provided a convenient hide-out for insurgent tribes and defaulting feudal chiefs. In January 1767, Lieutenant Fergusson set out on an expedition from Medinipur and spent more than a year to bring the feudal lords of these western districts to order.

Fergusson's mission was only partly successful as were those of Captain Forbes and Lieutenant Nan against the Chuar rebellion during 1769-70 and of Lieutenants Goodyear and Dunn against various rebels during 1771-73 in the southern and western parts of the district. The East India Company was forced to change its own nature and constitution to cope with these situations. To improve revenue matter the Company appointed a 'Supervisor' in each district not only to collect revenue but also to gather detailed information on revenue-yielding subjects. In 1772, the Company took direct charge of the entire care and management of revenues. The Controlling Council was replaced by a Revenue Board and the European Supervisors, henceforth styled as 'Collectors', came under the control of its Governor. Collectors were assisted by an Indian revenue expert called Diwan. Panchet, which was more peaceful than the rest of the district, was joined with Bishnupur (in eastern Bankura) and Birbhum under a single Collector, and one Ram Kanta Biswas was rewarded with the post of Diwan.

In spite of these and other important organizational changes, the British faced considerable difficulties in enforcing their authority on the chiefs of the estates in this plateau fringe. The troublesome estates had to be separated from the rest. And so, by Regulation XVIII of 1805, a Jungle Mahals district – composed of 23 Parganas and mahals (including the present Purulia district and parts of Birbhum, Bardhaman, Bankura and Medinipur) – was formed and placed under a Magistrate. During the late 18th and early 19th centuries the British were utterly confused about their administrative units. This is evident from the frequent transfer of territories from one jurisdiction to another. Moreover, parts of the district were attached to Purulia from Medinipur, others from Ramgarh, and others again from Birbhum.

During the 25 years succeeding the formation of the Jungle Mahals district, the area included therein was brought under much closer control. There were small military establishments at Jhalda and Raghunathpur on the Calcutta Benares Road and these with the police organization were sufficient to bring the district to a state of comparative order. The police system was, except in Panchet, provided for in the Regulation of 1805, the zamindars themselves were the police Darogas, and they provided and were responsible for the subordinate rural police. In Panchet, where the area was too big for the zamindar to exercise a close enough control, the system was supplemented by a thana system, the cost of which was provided by the zamindar.

The flames of Kol revolt in Singhbhum, Ranchi and Palamau reached Purulia in 1832 and culminated into the Ganga Narayan Hangama. A disputed succession to the Barabhum Raj sparked off the disturbances.

In view of these circumstances the Government had to exempt the old hereditary landholders in the jungle estates for generations from the ordinary sale laws arising out of arrears of land revenue or for private debts. Moreover, by Regulation XIII of 1833 the Jungle Mahals district was broken up and a new district called Manbhum with its headquarters at Manikjar was constituted. At that time Manbhum district included large parts of Bankura and Bardhaman and extended from Dhanbad in the north to Dhalbhum, Saraikela and Kharswan in the south in the present States of Bihar and Orissa. At the time of the formation of the Manbhum district, it was withdrawn from regular administration and placed under the officer called Principal

Assistant to the Agent to the Governor-General for South-Western frontier. In 1838 the headquarters of Manbhum district was removed to 'Purulia', described then as lying 'in the centre of the jungles'. The Revolt of 1857 had very little impact on Manbhum and the records show a steady advance in more systematic and more closely organised and supervised administration.

The Santal uprising in 1869-70 was followed by the transfer of Shergarh and Pandra (east of the Barakar river) to Bardhaman, Chhatna and Mahisara to Bankura, while the criminal jurisdiction of the remainder was retransferred to Manbhum. The civil, criminal and revenue jurisdictions were thus made coterminous. In 1879, Raipur, Khatra and Simlapal thanas were transferred to Bankura district.

Finally, in October 1956, Manbhum district was partitioned between Bihar and West Bengal. The Purulia Subdivision (excluding Chas and Chandankiari police stations to the north and Chandil, Ichhagarh and Patamda police stations to the south) became a district of West Bengal under the States Reorganization Act and the Bihar and West Bengal (Transfer of Territories) Act 1956, following the report of States' Reorganisation Commission in 1955. Chas and Chandankiari police stations were presented to the Dhanbad Subdivision which also became a full fledged district of Bihar in October 1956. The territory under Chandil and Ichhagarh police stations was presented to Sarakela State and that of Patamda police station (under Barabhum thana) to Dhalbhum Subdivision of Singhbhum. The Reorganisation Commission detached Chandil, Ichhagarh and Patamda police stations to integrate them with the adjoining tribal areas of Singhbhum, while Chas and Chandankiari (with a heterogeneous population, characteristic of the adjoining coal belt) were tagged to Dhanbad district for administrative convenience and also for contiguity of the main Damodar coal belt. The remaining 6,259 sq. kilometers of the Purulia Subdivision came to West Bengal not only because it contained an overwhelmingly Bengali-speaking population but also because an integrated and all round development of the Kangsabati Project necessitated administrative control of West Bengal over the entire catchment area of the Kasai river. Had language been the only consideration, then Purulia could have emerged as a much larger district with important Bengali speaking industrial areas now in Bihar.

Since the formation of Purulia district, its Revisional Settlement Operations did not face any boundary dispute with the adjoining districts of Bihar and, therefore, there has been no inter-State transfer of territory.

TOPOGRAPHY :

The district of Purulia forms the last two steps in the descent from the hills of central India and Chhotanagpur plateau to the Damodar plains of West Bengal. According to the structure and landform, Purulia is a part of the Ranchi peneplains, and this physical character is so dominant that the Government of India has classified this physiographic unit as an economic region.

As is usual with a shield-rimland, the district displays typical old-age characteristics of a moderate absolute altitude and moderately low relative relief. Absolute relief increases towards the west and the south marked by a line of sharply rising but almost flat topped arches clothed in luxurious vegetation. The rest of the district has a gently undulating topography with occasional hillocks (Panchet Hill, for example) of hard rocks. These are residual hills, bearing testimony to the high plateau of ancient times which has been eroded down to produce the present landform. Some of these isolated hills and the bulging interfluves in the eastern part of the district are wooded.

The highlands of Purulia are actually the remnants of the spurs projecting from the Ranchi plateau to the west and functioning as watersheds of the Subarnarekha-Kasai-Damodar group of rivers.

At the extreme north-west, the trijunction of Purulia, Ranchi and Hazaribagh districts is at the confluence of the Dankar Gharh Nala descending from Ghoramara Pahar to the north. The eastern part of this truncated tongue, known as Ajodhya Pahar, forms the main highland region of Purulia. It acts as a water-shed between the Kasai and the Subarnarekha. Numerous small streams drain its western and southern slopes into the Subarnarekha and the northern and eastern slopes into the Kasai and the Kumari.

To the west and south of Ajodhya Pahar occur a number of residual hills, isolated and detached from the parent body. In Jhalda many such outliers rising steeply from a relatively smooth surface at 300 metres to above 500 metres diversify the landscape on either side of the Jhalda-Muri road.

Dome shaped hills due to exfoliation of gneiss (called Bengal gneiss or Dome gneiss) in regular circular scales (like that of an onion) are also seen. The most spectacular of these is the Jajuhatu dome (23°18'N & 85° 57'E) roofed by a smooth gneissose sheet-rock rising to 542.5 m. and encircled by numerous streams which radiate from it into the Rupai Nala.

At the southern periphery of the Baghmundi Hills, the prominent outliers within the district are the 377 m. - high Kadali Pahar and 348 m.-high Khairapahari. There are similar hillocks of igneous rocks further south upto the Dalma lava range in Singhbhum district.

The important peaks on the main highland mass of Baghmundi-Ajodhya are the 580.5 m.-high Gonja Pahar and the Gugui Pahar also 580.5 m. - high to the north-west where porphyritic granite-gneiss is the predominant rock.

The Dalma lava range, skirts the southern margins of the district and acts as a divide between the Kumari and the Subarnarekha. These form conspicuous relief features in the south-east where the 432.7 m.-high Bhandari in Banduan thana is the highest peak. But due to degradation they have lost all topographic expression in Manbazar and Barabhum thanas. Many small but perennial streams drain the rugged northern face of the Dalma range and discharge into the Kumari Nadi. Unlike the Ajodhya Hills the Dalma range do there not offer a steeply rising sharp surrounding but a gently rolling uplifted peneplained surface.

At the extreme north-west, the district boundary runs along the centre of the Ghoramara Pahar, the ridge lines of which have an east to west strike enclosing and running parallel to fault troughs. This highland acts as an watershed between the Damodar and the Subarnarekha.

To the north-east of the district lies the 643.5 m.-high Panchakot or Panchet Hill formed of Upper Gondwana sedimentaries. The Panchet Hill is well wooded and overlooks the vast Panchet Hill dam across the Damodar.

The undulating plains may be divided into a number of interfluves and broad valleys which, from north to south, are (1) The Damodar valley; (2) the Damodar-Kasai inter fluve; (3) the Damodar-Dwarakeswar and the Dwarakeswar-Kasai interfluves; (4) the upper Silabati catchment; (5) the Kasai-Kumari interfluve and (6) the Subarnarekha valley to the west and south-west.

SOIL :

In general three types of soils have been recognized in this district viz. (1) residual types derived from weathering of granites, gneisses and schist (2) Lateritic soil in the upland areas (3) Clay loam to clay in the valleys. The fertility is low, as the soils contain very little organic matter.

Soil erosion is the most prominent phenomenon of the district resulting in huge deposition of fertile soil in the valley region. Vast areas of land remained uncultivable wasteland. In this district total 165200 hec. of land is affected by soil erosion. Out of this affected land, 135000 hec. is in non-forest areas and 30200 hec. in forest areas.

AGRICULTURE :

Cultivation of this district is predominantly monocropped. About 60% of the total cultivated land is upland. Out of the total agricultural holding about 73% belongs to small and marginal farmers having scattered and fragmented smallholding. Paddy is the primary crop of the district. 50% of the total land is under net

cropped area and only 17% of the net-cropped area is under Aman paddy cultivation. The crops are grown mostly under rainfed condition, generally with low fertilizer consumption per unit area. Thus per hectare production is also low as compared to other districts of West Bengal.

MINERAL RESOURCES :

Paradoxical, though, it may sound that this industrially backward district is endowed with mineral resources of a wide range of varieties. According to the findings of GSI there are ten types of mineral deposits in this district. The main ones being Coal, Limestone, Rock Phosphate, China Clay, Quartz etc.

The main mineral resources of the district is Coal. Purulia district sustained two big Collieries. One is at Ranipur and the other is at Parbelia. Other Coal mines are Deoli and Bhamuria. Other important minerals so far explored and reported are Apatite or Rock Phosphate of Beldi, Panrkidi etc, Limestone of Jhalda, Basemetal of Tamakhun, China clay of Mahatomara, Fire clay of Malti, Quartz of Mirmi, Siliminate of Paharpur, Decorative Stone of Bero, Dhunia etc.

FISHERIES :

The production of fish in this district is not much encouraging though a large no. of tanks both under Govt. & Private sector are there. If these tanks are utilised properly for Pisciculture and Duck rearing the production of fish as well as eggs will be increased to a considerable extent thereby increasing the scope of income & employment to the rural people. Total inland area of the district is 71,255 hectare. So, there is an ample possibility to bring more area under efficient pisciculture.

Total 1419.10 Ha. water area covered during last three years for pisciculture through distribution of minikit, production of fry/fingerlings, demonstration centre on table fish production supply of fishing nets and requisites, infrastructural facilities as fishermen village road, community hall, housing etc. and development of different fishermen co-operative sectors through pisciculture, training etc. Total 6,807 fishermen were benefited.

IRRIGATION :

There is altogether 32 Nos. of medium irrigation Schemes (17 under Purulia irrigation Divn., 6 under Construction Divn and 9 under Investigation & Planning Divn.) in this district. Out of these 32 Schemes, 23 are completed and 9 are in various stages of execution. Four new schemes Karru, Dambara, Dudhijore and Horai are programmed for execution during the 10th Plan.

There are altogether 135 RLI schemes with effective command area 138 hectare. Out of which 21 nos. are electrified and rest 114 nos. are diesel operated. Out of these schemes 16 are permanently defunct. 17 nos. Mini RLI in the different remote areas have been installed so far.

There are altogether 61 Minor irrigation Schemes. The total Irrigation potential created are 8541 hectare in Kharif and 1955 hectare in Rabi. No. of Dug-well constructed so far are 4218 nos.

CLIMATE :

Rainfall characterises the climate of the district. Southwest Monsoon is the principal source of rainfall in the district. Average annual rainfall varies between 1100 & 1500mm. The relative humidity is high in monsoon season being 75% to 85%. But in hot summer it comes down to 25% to 35%. Temperature varies over a wide range from 7° celsius in winter to 96.80° celsius in the summer.

WATER RESOURCES :

Following the natural slope of the district all the rivers which intersect or take their rise within it, have an easterly or south-easterly courses. Only the Subarnarekha flows south and receives west and south-west

flowing tributaries. The Kasai is the master-stream of the district, draining more than three-fifth of the district. All the tributaries of the Damodar, Dwarakeswar, Kasai, Kumari and the Subanarekha are non-perennial and subject to flash floods. Except where they run over exposed rock, their beds are usually deep in gravel and sand, their banks are abrupt and broken into deep gully's wherever drainage from the surrounding country finds its way to the level of the stream.

The Subanarekha : The Subanarekha is the westernmost river in Purulia. It originates from a surface spring near Pisk rail station 11 kms. south-west of Ranchi town and after descending to 300 metres from the 800 metres high Ranchi plateau by magnificent waterfalls (e.g. the Hudru) and deep easterly gorges, takes a sharp elbow bend southwards (at 23°26'N & 85°52'E) to describe the western boundary of the Purulia district

The Damodar : The Damodar marks the northern boundary; its course through the district is almost due east through the vast Panchet Hill reservoir. The Panchet Hill dam has been built on the Damodar 5 kms. above the confluence with the Barakar which is the tri-junction of Dhanbad, Bardhaman and Purulia districts.

The Gobai : The most important right bank tributary of the Damodar emptying into the tail-end of the Panchet reservoir is the Gobai or Gowai Nadi which has only a part of its upper course and the entire lower course within Purulia, but the middle course within Dhanbad (Chas and Chandankiari thanas) district.

The Dwarakeswar : The Dwarakeswar or Dhalkisor rises from the bedlands to the east of Bagalia rail station on the Asansol-Purulia section

The Silabati : The Silabati or Silai River as well as the Arkusa Nala and their ramifying channels have furrowed up the eastern end of the south-east projecting Dwarakeswar-Kasai interfluvium at Hura thana.

The Kasai : The Kasai is the most important river of Purulia district. But for more than three-fourths of its length it is non-perennial. The Jabarban peak on the Ghoramara Pahar (referred to earlier) is the place of origin of the south-east flowing Kansai Nala which becomes Kasai Nadi after receiving the combined waters of Girgiri Nala and Sahar Jhor (issuing from Gonja Pahar and Ajodhya) 3 kms. North of Begunkuda (23°21'N & 86°04'E)

The Kumari : The Kumari Nadi issues from the eastern face of the Baghmundi uplands covered by dense sal forest (Mudali reserve forest).

The Nangasai : The Nangasai Nala originates from the saddle like interfluvium of the Kumari-Subanarekha basins

FORESTRY :

Total forest coverage in this district including social forestry and degraded forest as per Satellite Imagery data is 185726 ha which is 29.69% of the total land of the district. As per report of the forest dept. total area under forest Dept. is 115226 ha.

The management and maintenance of Forest is being done by Joint Forest Protection Committees under active control of different divisions of Forest Department. At present 72 nos. of Forest Protection Committees (Purulia Divn.-171, KSC-I Divn.-235) are working in this district. These committees have not only helped to protect the plantation areas but have also guarded against illegal felling of trees.

The natural forests of the district are mostly of mixed nature and restricted to northwest part of the district covering Ajodhya Hills and Panchet hills of northeast. As per Remote sensing data the forest cover

of this district is increasing compared to its past status. The extensive farm and social forestry plantation programmes might have contributed in a big way to the increase in the forest cover. Forest types Purulia district as per Satellite Imagery data (IRS-IB TISS II Dec. 1994) are shown below.

Sl. No.	Name of the class	Area (Sq.km.)	Percentage to the total area of the district	
1	Dense Sal Forest		37.98	0.61
2	Mixed Dense Forest		141.97	2.27
3	Open Sal Forest		112.27	1.80
4	Mixed Open Forest		762.83	12.20
5	Plantation		124.45	1.98
6	Degraded Forest		677.76	10.83
TOTAL		1857.26	29.69	

FLORA & FAUNA :

The natural vegetation of Purulia is essentially arboreal. It has, however, been cleared and degraded or replaced by shrubs, bushes, meadows and cultivated fields to such an extent that this statement has little practical significance today. It was indeed, a part of the Jungle Mahals, a land of tropical moist deciduous forests. Which have now degraded into tropical dry deciduous forests due to biotic interference such as shifting cultivation, fire, grazing and also unscientific forest management. Such interference has affected the flora of the district either by checking the progression of vegetation to the higher successional stage or by bringing about retrogression.

Many species of the original virgin forest are still found. Many wild plants yielding food, fibre and fire-wood and some of them having miraculous curative properties in the treatment of various ailments, are still valued and protected by the tribal people of the district. In every village of the tribal people there still remains a sacred grove, called Jharia or Sanna, a small patch of virgin jungle preserved from the axe as a refuge and local habitation for one or more sylvan deities. The more advanced non-tribal population also uses decoctions of certain plants to alleviate pain, heal wounds and create pleasurable excitement (narcotics and aphrodisiacs). But very strangely, in spite of this utilitarian plant role, the district has remained backward in arboriculture, horticulture and silviculture. The problem is being tackled seriously and scientifically only since the Second Five Year Plan. During the last three or four centuries, a number of important plants have almost disappeared due to environmental changes brought about by ever encroaching human habitats. On the other hand, a few exotic plants (e.g., papaya, guava, tomato, potato, eucalyptus) as well as artificially regenerated extinct plants have diversified and enriched the flora of the district.

It is only in respect of comparatively limited area, viz., the inaccessible uplands of Panchet, Ajodhya-Baghmundi and Dalma and some patches on the upper catchment areas of the Silai, Arkusa, Dwarakeswar and also the Kasai valley (in Hura P.S.) that the district can still be described as a well wooded country.

The large grey, moist soil is the most predominant forest tree. The sal timber is heavy, strong and tough. The fruit is edible, the resin is used locally for various purposes and the bark serves as a tan. This is the sacred tree of the tribals, the tribal deities being worshipped under its shade. Kendu leaves have become the most important revenue earning product of the forests of Purulia.

To the tribals Mahua is a very important plant. Its hard reddish brown timber is used for many purposes, but it is seldom cut down for timber alone. The flowers raw or cooked are an important article of food. When dry, they store well, keeping in good condition for a very long time. A coarse spirit distilled from the fermented flowers is the liquor most generally consumed in the district. The unripe fruit (kochra) is eaten

as cooked vegetable. When ripe, the outer flashy pulp is only eaten. It is generally infested by a small white worm and can only be consumed by the less fastidious. The kernel yields oil which is used for culinary purposes, for lamps, making soaps, anointments and adulterine ghee. The tree is particularly important because flowers and fruits appear in the hot season when rice stocks are low

In Purulia, as elsewhere in West Bengal, most of the wild life is confined in its meagre forests. With deforestation, wild life has also diminished. Most of the big games once found in the district are now extinct.

IMPORTANT PLACES :

Ayodhya Hill

Ayodhya Hill : Dr B.C. Roy, the second Chief Minister of West Bengal had dreamt of setting up a hilltown on the base of this hill. That dream could never be converted into reality. However, young mountaineers come to Ayodhya hill for learning the basic course in mountaineering. This hill in the district of Purulia is around 700 m high. In this range there are many small hills namely Gorgabunu (900 m), Mayuri etc. It is said that during their period of exile, Ram-Chandra and Sita had come to this place and stayed. Sita was thirsty and Ram pierced an arrow through the earth's soil crust and through

that water gushed out and Sita quenched her thirst. The place is known as Sita-kunda. During the full moon day in Baisakh every year tribals of nearby area come and join in the game of hunting wild animals. There is a small hydel project at Bandhgho-tu. Now-a-days there is a project of sericulture development sponsored by the Govt. of West Bengal

Chau Nach : Purulia Chau is danced in a very small geographic region. The Chau is a belt - a dance belt that girdles part of the eastern region of India. It comprises three contiguous states, each of which has a small sequestered pocket that cloisters the art and after which the tradition in the region is named - Seraikella Chau in Bihar, Mayurbhanj Chau in Orissa, and Purulia Chau in West Bengal. All three Chau forms are danced by men only. The Seraikella and Mayurbhanj versions seem to have common roots. The Purulia form, as a dance, seems to belong to a different realm altogether.

Chau Nach
